

Keyscan Removes The Barriers To Centrally Managed Access Control

Keyscan Hosted Services (KHS) eliminates the upfront expense associated with Centrally Managed Access Control. You no longer need to implement your own central host service in order to build your customer base and generate recurring monthly revenue.

With KHS, there are no compromises in performance, ease of operation or security. In fact, all data transmissions are protected by AES Rijndael with an encryption level that is approved for US government "Top Secret" transmissions.

In addition, growing organizations will appreciate that KHS will make the future transfer of hosting responsibilities seamless and without complications.

Visit our web site to learn more about KHS and how even single door requests can be addressed with our PoE equipped single door controller.
