Keyscan makes access control more accessible with Keyscan Hosted Services

A Centrally Managed Access Control Solution

Keyscan is pleased to introduce Keyscan Hosted Services (KHS), a centrally managed access control (CMAC) solution. KHS is a new service that takes Centrally Managed Access Control to a whole new cost-saving level for Access Control Dealers. With KHS, dealers can choose the option to have access control data and software hosted by Keyscan using our secure server infrastructure.

KHS simplifies the entire process and allows dealers the opportunity to create a new CMAC business model offering remote and RMR-based access control services to their customers while avoiding the upfront expense attributed to implementing their own central host service.

"Keyscan offers the industry exciting and powerful access control solutions that meet the real world challenges of today," said Steve Dentinger, Keyscan Director of Sales and Marketing. "Keyscan Hosted Services takes all the elements involved in a typical access control installation and moves them to our central location. The result is a convenient service designed to help our dealers enter the Centrally Managed Access Control business model and build intrinsic value to their business. It can also save their customers thousands of dollars by providing unsurpassed convenience never before seen in the access control industry."

Rethinking Access Control

Keyscan Hosted Services allows dealers to bring the benefits of Access Control to a whole new group of end-user customers that would not have previously considered it an option. It provides the ideal solution for end-users who need, or want, some level of autonomous control over their access control systems; yet allows them to focus on their core business, while having peace of mind that access control security experts are managing their facility security.

"Keyscan's Hosted Services has proven to be very beneficial to access control dealers," Dentinger added. "Until now, the fundamental barrier to entry for many interested in a Centrally Managed service offering was the up front costs of implementing their own infrastructure and the obvious maintenance required. Now, with KHS, they can get started immediately and begin offering their customers a centrally managed access control service."

KHS advantages with zero risk

KHS makes it easy for dealers. All that's needed is a web-connection and K-WEB software. But, what really sets KHS apart from the competition is if dealers ever choose to implement their own hosted service, at a later time, Keyscan will assist them in making the future transfer of hosting responsibilities seamless and without complications.
